

The Quark Structure of Hadrons

Contents

Bibliography

1. Introduction

1.1 Gell-Mann-Nishijima formula

1.2 Conservation laws

2. Mesons

2.1 Pion (spin, parity, Clebsch-Gordan coefficients)

2.1.1 Spin and parity of the neutral pion

2.2 Kaon (spin)

3. Isospin multiplets

3.1. Radiative decays (Crystal Barrel experiment, Dalitz plots)

4. C parity

4.1 G parity

5. Meson nonets

5.1 Nomenclature

5.2 Quark-antiquark wave functions

5.3 Mixing angle (ideal mixing)

5.3.1 Pseudoscalar nonet

5.4 OZI rule

6. SU(2) (Wigner rotations)

6.1 Isospinor of the antiquarks

6.2 Symmetrization (pion and rho mesons)

6.3 Young tableaux

6.4 3-quark spin wave functions

6.5 3-quark isospin wave functions

7. SU(3)

7.1 SU(3) wave functions

7.2 Application: radiative meson decay

7.3 Application: measurement of the pseudoscalar mixing angle

8. Heavy quarks

8.1 Charm quark

8.2 Bottom quark

9. SU(4)

9.1 u,d,s,c quarks

9.2 u,d,s,b quarks

10. Quarkonium

10.1 Charmonium

10.2 Bottomonium

10.3 Potential model

10.4 Level splittings

10.4.1 Fine splitting (charmonium), 1P1 mass

10.4.2 Hyperfine splitting (charmonium)

11 SU(3) color

11.1 Glueballs

11.2 Scalar mesons (Crystal Barrel, Dalitz plot)

11.3 Intermezzo 1: branching ratios of isoscalar mesons into 2 pseudoscalars

11.3.1 Isoscalar coefficients

11.4 Glueball decays

11.4.1 Glueball mixing with quark-antiquark

11.4.2 Tensor glueball

12: Intermezzo 2: parametrization of resonances (K- and T-matrix, coupled channel, Breit-Wigner distribution)

13. Tetraquark

13.1 Charmonium-like

13.1.1 X(3872), Z(3900), Z(4430)

13.2 Bottomonium-like

13.2.1 Zb(10610), Zb(10650)

14. Pentaquark (θ^+ , P_c^+)

15. Baryons

15.1 Nomenclature

15.2 Ground state baryons

15.3 Construction of SU(3) wave functions

15.4 Symmetric quark model

15.5 Application of SU(3) symmetry: Gell-Mann-Okubo formula

15.6 Applications of SU(3) symmetry: **Magnetic moments of baryons** (proton, neutron)

15.6.1 Magnetic moment of the Lambda

15.6.2 Magnetic moments of other baryons

16. Excitations of light baryons

16.1 Harmonic oscillator

17. Heavy baryons

17.1 u, d, s, c baryons (Λ_c , double charm, Σ_c , Ξ_c , Ω_c)

17.2 u, d, s, b baryons (Λ_b , Ξ_b , Ω_b , Ξ_b^*)

18. Spin and decay angular distribution

18.1 Helicity formalism

18.2 Applications (Lambda decay, annihilation, spin of the Omega hyperon)
